

VISITOR MANAGEMENT SOFTWARE

Presented by STAR LINK

INTRODUCTION

Visitor Management System is a web based software that allows you to maintain the record of the visitor. Being Web Based Software, it can be browsed from any part of the world with any internet enabled devices depending upon server availability . Also, Visitor Management Software from Star Link is designed to give a planned structure to the visitor-employee meeting. It also allows the admin to track the record of the visitors like other details of the belongings they are carrying, the timing of the visit. And also, if they are scheduled to come next, their every details will reflect in the system with their name.

Visitor Management System, a software which helps you to maintain the entire record of visitors visiting the office for meetings, conferences and presentations.

It provides a planned structure for the employees and visitors to manage meeting requests, Meeting duration, Accessible gates for the visitors, Predefined meeting area and Priority settings.

Companies where visitor frequency is high, this Software reduces the visitor's registration time.

Features catered by the software are: Multiple USER log-in, Report Generation like User, Gate and Visitor, Option to install camera with the software and admin authorization option.
